OBJECTIVE

A Computer Engineering graduate looking to transition directly into a technical support (TSR), IT support, or customer service role. Combines a solid foundation in hardware systems, network configuration, and POS deployment with conversational English proficiency, fast typing capabilities, and hands-on client-facing support experience. A resourceful problem-solver with practical front-end web development skills who uses modern AI tools to accelerate workflows and is actively learning backend fundamentals. Aiming to leverage clear communication, technical troubleshooting, and customer service skills to resolve user issues effectively.

EXPERIENCE

IT Support Intern | CodeLikeUs Technologies Inc. (zenpos.co)
Cebu, Philippines

June 2025—July 2025

- Performed **POS terminal deployment and preparation** for newly delivered devices before client distribution.
- Cloned operating systems using **USB system images** and configured system settings for POS environments.
- Configured **network settings and IP addresses** for peripherals such as receipt printers and cash drawers.
- Conducted **hardware checks and troubleshooting** to ensure devices were fully operational.
- Assisted in **POS system setup and peripheral configuration**, ensuring devices were ready for client use.
- **Conducted onsite technical support** at client locations (e.g., cafés) to troubleshoot POS devices, resolve minor system errors, and verify device serial configurations.

PROJECTS

HealthSense

Undergraduate Thesis

- Designed and fabricated a smart healthcare self-service kiosk system utilizing a Raspberry Pi 5 core and localized micro-controller nodes.
- Integrated vital signs sensors with physical hardware components, engineering a durable, functional marine plywood structure housing.
- Developed a web-based management platform to capture, stream, and log real-time medical data for user tracking and analysis.
- Authored comprehensive technical documentation, schematics, and system architecture manuals for the final engineering review.

Gym Management System

Web Development Project

- Developed a comprehensive system aimed at helping owners and administrators manage gym operations efficiently. Integrated features for user registration, online payment processing, and interface design to enhance the overall experience for both administrators and members.
-

Automatic Sliding Door

Fundamentals of Mixed Signals

- Designed and assembled an automatic sliding door system using analog components, including a PIR motion sensor, L298N motor driver, 555 timer, and relay. Focused on circuit layout, component placement, and analog system integration without the use of micro-controllers.

IoT Automatic Locking System Zuit Project

IoT & Embedded Systems Project

- Developed an automated locking system integrated with **AWS** for cloud-based monitoring and control. Utilized **Wokwi** for hardware simulation to test circuit logic and ensure reliable lock engagement before physical implementation.

IoT Smart Boarding Home

Network Simulation Project

- Designed and simulated a smart boarding home system using Cisco Packet Tracer, focusing on IoT device connectivity and network configuration.

EDUCATION

Cebu Institute of Technology - University

Bachelor of Science in Computer Engineering
2026

August 2020—May

Cebu, Philippines

SKILLS

Communication & Core Skills: Conversational English (Verbal & Written), Fast Typing / Keyboard Navigation, Client Support, Active Listening.

Multimedia & Creative: Digital Video Editing (Cinematic / Content Editing), Color Grading Basics, Audio Syncing, CapCut, Wink, Canva, Alightmotion.

Programming Languages: C, C#, C++, Assembly Language, JavaScript, TypeScript, HTML, CSS, Tailwind CSS

Front-End Development: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS

Tools & IDEs: Visual Studio (C# / .NET), Visual Studio Code, Arduino IDE, Git, Eagle, Cisco Packet Tracer, Figma

AI Automation & Tools: Activepieces (Workflow Automation), ChatGPT, Claude, Gemini, Blackbox Ai, Trae, Prompt Engineering

Hardware & Embedded Systems: Soldering, Electronics Troubleshooting, Arduino, ESP32, raspberry pi

IT & Systems: POS System Deployment, System Imaging, Network Configuration, Peripheral Setup, Technical Support

Certifications & Training

AI Prompting for Automation Level III | TESDA & ADVANCED by StackTrek

Blended (Online & Onsite) Training

- Designed and configured autonomous workflow integration and automated logic pipelines using Activepieces
- Developed hands-on competencies in generative AI prompting, autonomous workflow design, and task automation.
- Conducted benchmarking, risk evaluation, and practical testing across diverse AI models, multi-modal systems, and no-code tools.
